

## **Computer algebra system as a means of improvement of constructivist approach to financial education**

*Roman Hašek and Vladimíra Petrášková, University of South Bohemia, Czech Republic*

A teacher with practical insight into the operation of financial world plays an important role in the process of successful improvement of financial literacy. Her deep understanding of related issues enable her to develop pupils' knowledge in an effective constructivist way. We will show a way of use of computer algebra system Maple to introduction of students of mathematics teaching into the nature of basic financial products.
