

GeoGebraSpreadsheet and GeoGebraCAS workshop

Markus Hohenwarter, Johannes Kepler University, Linz, Austria
Zsolt Lavicza, University of Cambridge, Cambridge, UK

GeoGebra is free, multi-platform, open-source dynamic mathematics software with rapidly growing worldwide popularity. The basic idea of the software is to join dynamic geometry, algebra, and calculus, which other packages treat separately, into a single easy-to-use package for learning and teaching mathematics from elementary through university level. In this workshop, we will introduce new features of GeoGebra using the spreadsheet and the new symbolic algebra view.
