

New features in GeoGebra

Andreas Lindner

Pädagogische Hochschule OÖ, Linz

In this workshop news about the GeoGebra Apps and the GeoGebra website are presented, and further development of the software will be discussed. The new GeoGebra Apps are especially designed for the use of mobile devices. These apps include an exam mode which disables any communication and the use of other apps on smartphones and tablets. Besides the Augmented Reality (AR) Mode the focus of the workshop will lie on GeoGebra Classroom - the new feature for collaborative work. Teachers can create virtual classes and watch their student working on various math problems in real time.
